THIN10 the new product
of Quality Water

thin 10
by quality water

Style in your Home

THIN10 the new product of Quality Water is a direct flow reverse osmosis system without tank though a high-capacity even 1,6 litre of purified water per minute. With the low-cost system and fine inside and outside design is perfect for residential use. It fits closer places because of the 99mm thinness, even so you can install directly under the sink.

THIN10 has a practical front panel opening system and integrated quick connection filters so it is easy to maintain and replace cartridges without any tools. Because of leaking detector system and other security options subserve the comfortable and safety usage.

Owing to the unique construction, THIN10 is efficient and economical with its 60% recovery.

Our own innovated unique microprocessor controls the operation of the water purification system and it gives light signs about the function. If it is necessary also gives voice alarm.

The mobile application of THIN10 put wise to cartridge replacement when it is due. By the application the customers and the local distributors can keep contact. The warranty conditions the user manual and important information also can be found in the application.

MAIN FEATURES

direct flow RO
output: 1,6 litre/minute (19 °C, 4 bar inlet pressure)
recovery: max 60%
size: 390x535x99 mm
filters: 5 micron inline prefilter
silver impregnated GAC with KDF inline prefilter
3x180 GPD membrane (depending on model,
1-3 membrane can be replaced)
booster pump flow rate 3,4 L/min
water temperature: 10-45 °C
inlet pressure: 2-4,5 bar
weight: 9,2-11 kg (depending on model)
voltage supply: 240 V / 55 Hz
warranty: 2 years

BENEFITS

the thinnest reverse osmosis system
unique fine design inside and outside
high recovery rate
easy cartridges replacement & maintenance
no tank required
tool not required to open front panel
own innovated processor
filter change warning system
leaking detector system
own innovated mobile application
